

4 Advanced Particle Platforms

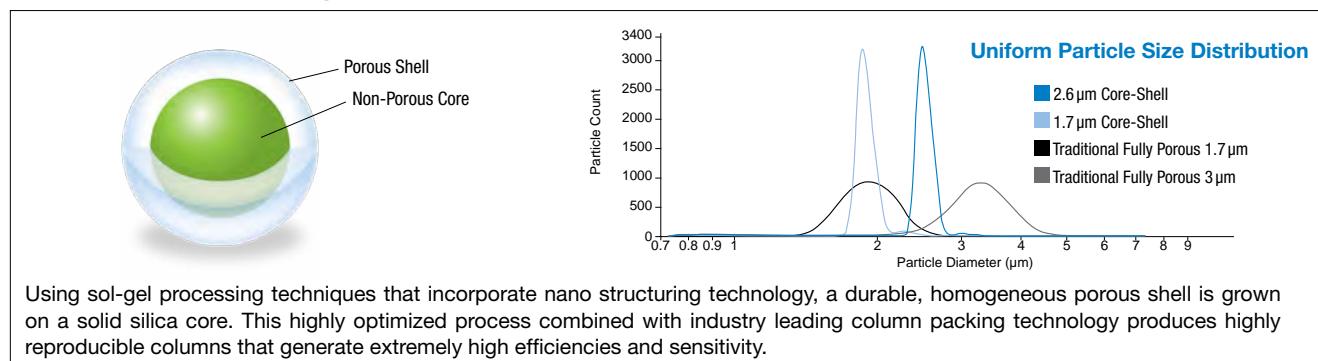

All four of the Biozen particle platforms were individually designed and built by Phenomenex to take advantage of integral levels of performance, ruggedness, and reproducibility for protein characterization applications.

Individually, each platform differs in the proprietary processing techniques used to control particle size and morphology.

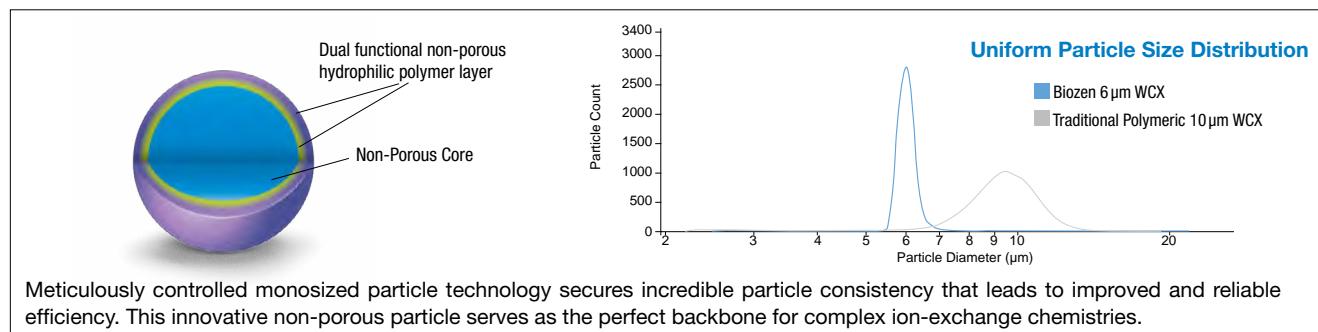

Thermally Modified Fully Porous

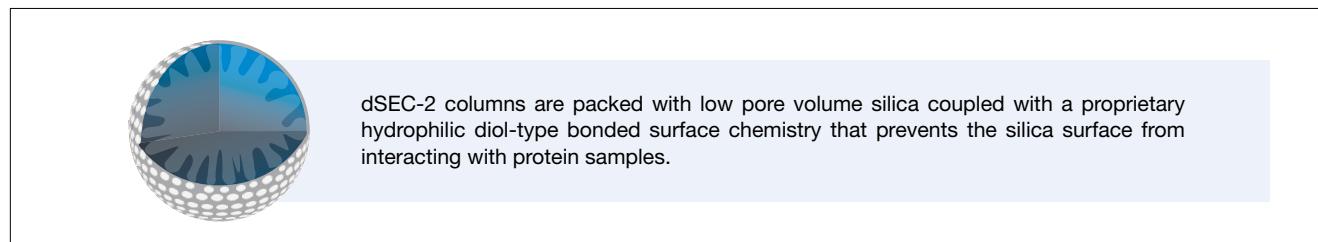

Core-Shell Technology

Monosized Polymeric Non-Porous

Pore Controlled Technology

8 Particle Chemistries

With a single innovative product line, you can now find a variety of quality particle chemistries designed and tested for biologics.

dSEC

Biozen dSEC-2
1.8 µm and 3 µm

Inert, high-strength porous particle for the separation and quantitation of monoclonal antibody aggregate and fragments

Intact

Biozen WidePore C4
2.6 µm

Core-shell particle with butyl stationary phase and optimal wide pore size distribution for better resolution of large biologics, including monoclonal antibodies and subunit analysis.

Biozen Intact XB-C8
3.6 µm

Large pore core-shell particle for fast intact and subunit biologic entry. C8 provides highly useful moderate hydrophobic selectivity.

Glycan

Biozen Glycan
2.6 µm

Provides optimal combination of high efficiency and selectivity for released glycans.

Peptide

Biozen Peptide XB-C18
1.7 µm and 2.6 µm

Overall retention of both acidic and basic peptides through C18 stationary phase with di-isobutyl side chains.

Biozen Peptide PS-C18
1.6 µm and 3 µm

Excellent retention by combined positively charged surface ligand and C18 ligand.

Oligonucleotides

Biozen Oligo
1.7 µm and 2.6 µm

Organic-silica core-shell particle bonded with a C18 stationary phase offers high selectivity for even minute oligo differences alongside high and low pH robustness.

Ion-Exchange

Biozen WCX
6 µm

Monosized particles grafted with linear polycarboxylate chains to envelop and separate proteins from acidic/basic variants

Sample Preparation Solutions

N-Glycan Clean-Up

HILIC Solid Phase Extraction (SPE)
High recovery of labeled, released N-glycans in a microelution format allowing for streamlined processing and clean-up of small sample volumes.

MagBeads

Streptavidin Coated
Higher binding capacity magnetic particles result in faster and reliable purification, clean-up, and isolation of proteins and peptide molecules.

To learn more, see p. 78

U.S. Patent Nos. 7,563,367 and 8,658,038 and foreign counterparts.

Oligo Characterization and Quantitation

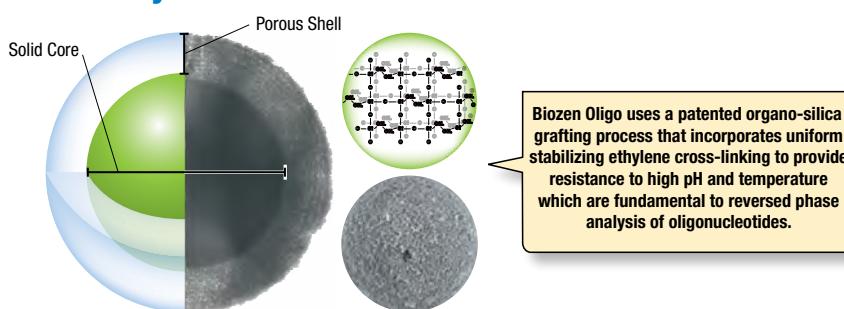

Advanced Oligonucleotide Analysis for Increased Recovery and Reproducibility

The Biozen Oligo LC Column brings a unique combination of core-shell versatility and high pH ruggedness necessary for oligonucleotide separations. Additionally, Biozen Oligo is packed in a unique bio-inert titanium hardware designed to minimize the sample loss and adsorption issues typically seen with stainless steel hardware, demonstrating this column's optimal utility for oligonucleotide characterization and quantitation.

- **BioTi™ Hardware Reduces Sample Loss and Adsorption**
- **Robustness at High pH and Temperature**
- **Core-Shell Advantage for High Efficiency**

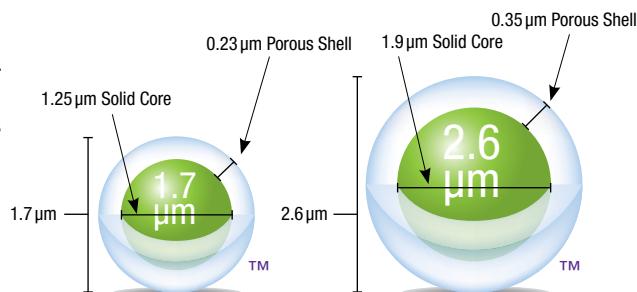

Patented Technology and Advanced Core-Shell Particle Chemistry

Patented Core-Shell Particle Chemistry

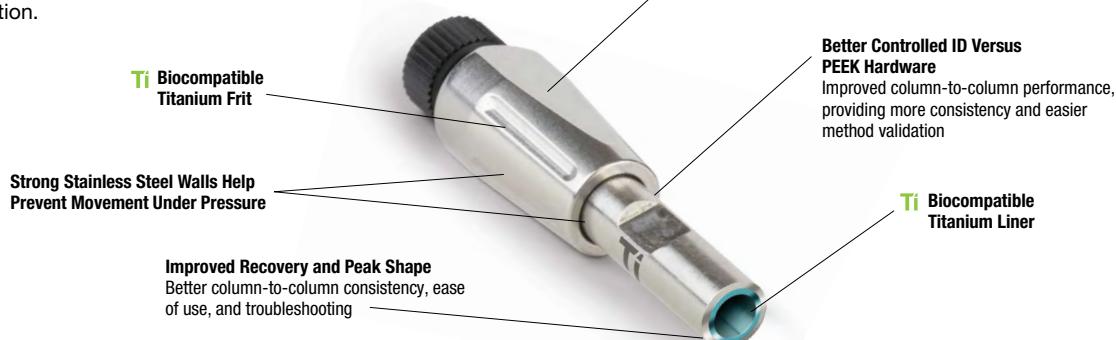

High Efficiency Core-Shell Particle

After meticulous core construction, a uniform porous silica layer is grown around the spherical solid silica core. This unique combination of precise particle architecture and particle size provides dramatic leaps in performance.

Inside the Biozen Oligo Biocompatible Hardware Difference

The use of bioinert hardware not only improves the chromatographic performance and consistency of oligonucleotides, but also provides improvements in sensitivity, enabling both quantitation and characterization.

U.S. Patent Nos. 7,563,367 and 8,658,038 and foreign counterparts.

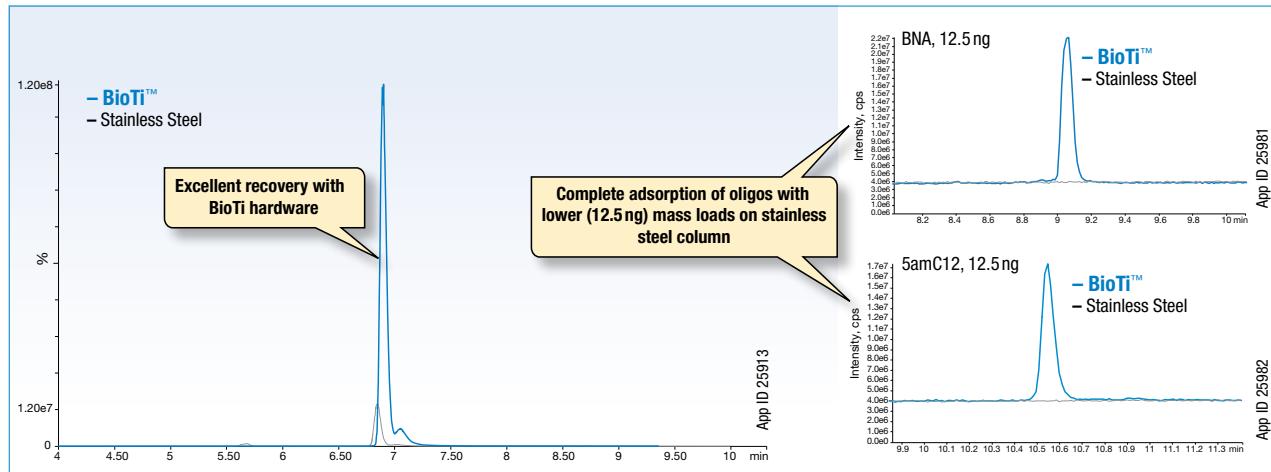

Oligo Characterization and Quantitation (cont'd)

BioTi versus Traditional Stainless Steel Hardware

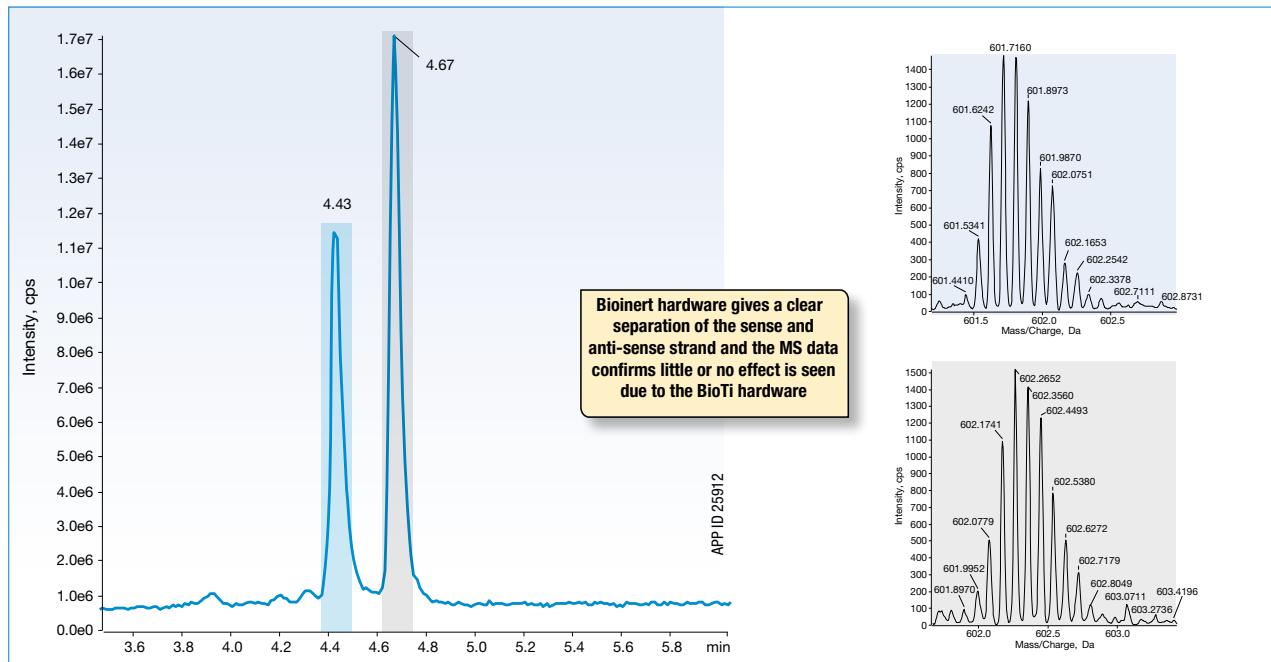

Oligos can chelate to trace heavy metals in stainless steel column hardware, leading to poor recovery, inconsistent chromatography and problematic carryover. The Biozen Oligo bioinert hardware pro-

vides greater sensitivity as well as improved recovery, demonstrating this column's optimal utility for oligonucleotide characterization and quantitation.

BioTi Ensures Method Robustness and Consistency from Injection-to-Injection!

LC-MS Analysis of siRNA using Bioinert Hardware

Peptide Mapping

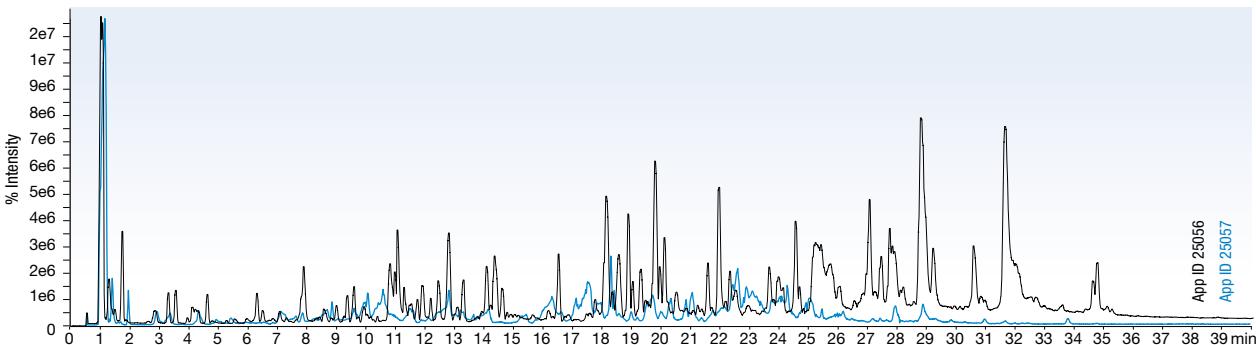

Digested mAbs or ADCs typically include a large body of compounds which are crucial to understanding post translation modifications. So we designed two Biozen Peptide columns to offer highly useful and unique retention profiles. Each allows for fast and

effective elution windows by utilizing either high efficiency core-shell or thermally modified fully porous particles to gain sharper peaks, better peak capacities, and overall higher sensitivity.

Aggregate Analysis

With mAb aggregate often at very low levels (<0.1 % by peak area compared to monomer) and fragment separation a requirement, adequate resolution and peak shape have become even more crucial method outcomes. To address this need, the robust set

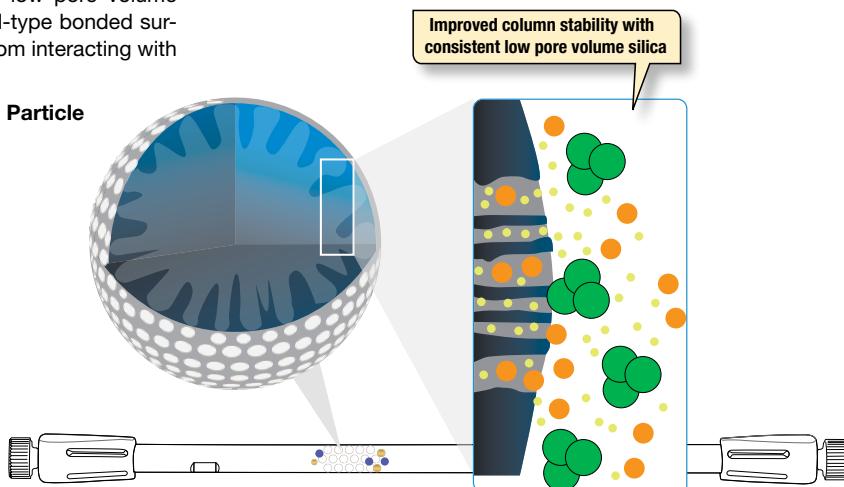

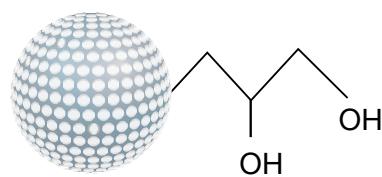

of Biozen SEC columns were developed with a combination of UHPLC efficiency and higher sensitivity, to drive resolution and identification of even lower level targets.

Biozen dSEC-2 Size Exclusion Columns

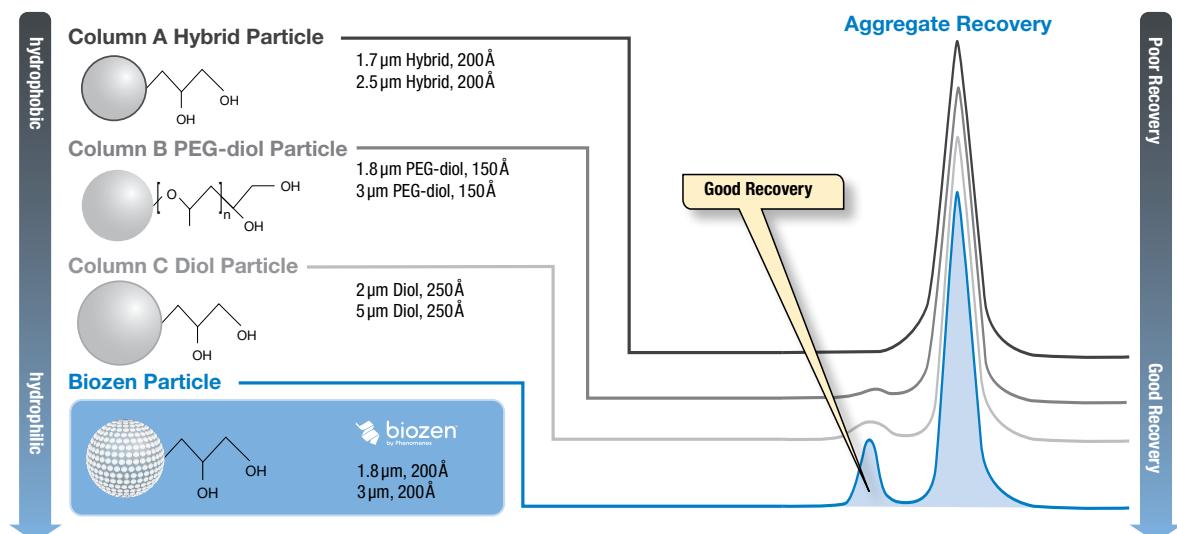

Advanced SEC Silica Particle Technology and Surface Chemistry for Characterization Biomolecules

The Biozen dSEC-2 columns are packed with low pore volume silica coupled with a proprietary hydrophilic diol-type bonded surface chemistry that prevents the silica surface from interacting with protein samples.

- Exceptionally Robust, Pore Controlled SEC Particle
- Extreme Stability and Exceptional Lifetime
- Reproducible Separations

Biozen dSEC-2 Hydrophilic Surface Chemistry Improves Aggregate Analysis

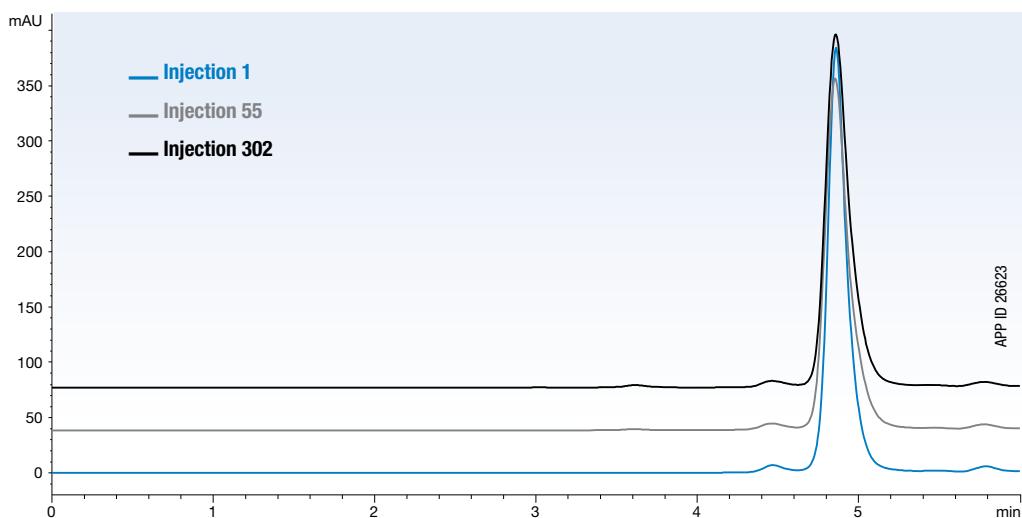

Comparative separations may not be representative of all applications.

Aggregate Analysis (cont'd)

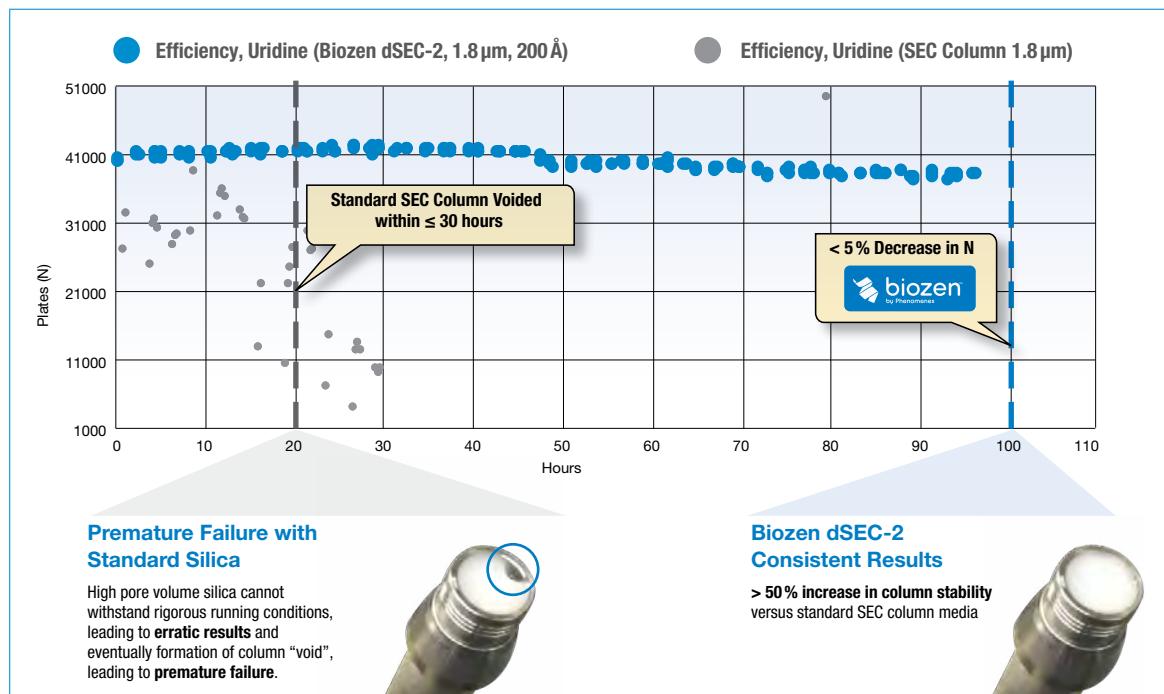

Improved Column Lifetime and Performance Stability

Phenomenex's optimized dSEC-2 column loading technology has significantly improved the overall packing density and silica distribution of the columns leading to improved chromatographic lifetime and stability.

Unchanged Performance After 300 Injections

Unchanged Performance After 100 Hours of Extreme Running Conditions

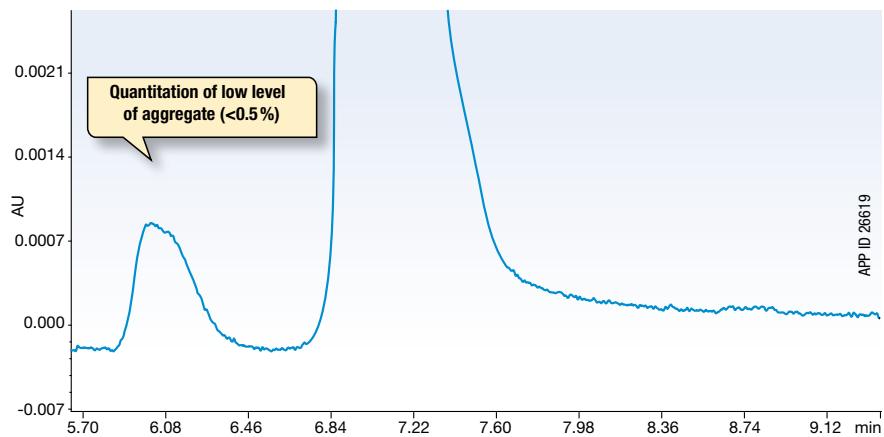

Aggregate Analysis (cont'd)

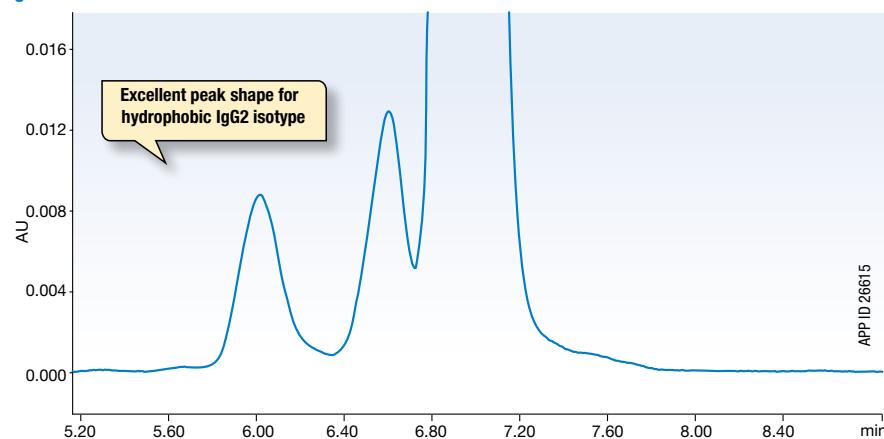

New Standard for Platform SEC Methods

Charge Variant Analysis

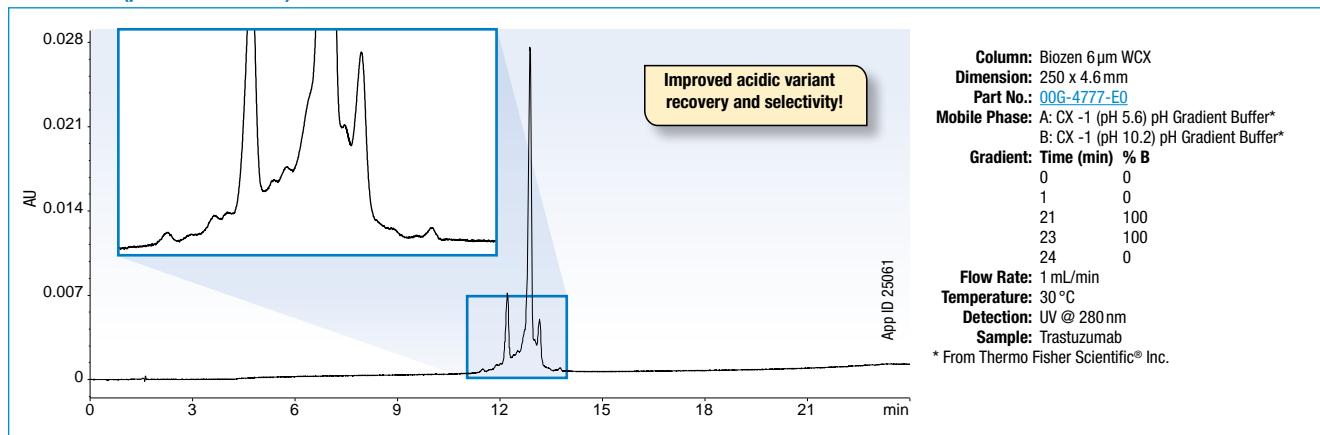

Biozen WCX was crafted to consistently decipher between native protein variants that arise from PTMs within a therapeutics creation and development. The linear polycarboxylate chains grafted to monosized non-porous polymeric particles, envelop and separate proteins from acidic and basic protein variants. With such a highly

tuned and controlled manufacturing process, Biozen WCX media affords scientists a way to reproducibly characterize heterogeneity while taking advantage of excellent recovery through high particle inertness and bioinert titanium BioTi™ column hardware.

Glycan Analysis

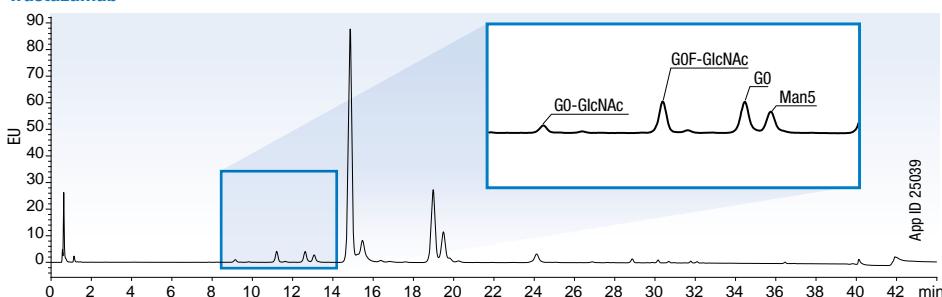

The unique selectivity of the Biozen Glycan was designed to provide higher order separations of released and labeled glycans. With a 2.6 µm core-shell particle size, customers using either HPLC or UHPLC systems can draw upon a high efficiency Biozen Glycan

particle run at higher linear velocities, to easily provide sharper peak shapes and faster elution windows, without high UHPLC pressures. Under HILIC-FLR or HILIC-MS conditions, the Biozen Glycan excels with increased polar retention and selectivity.

Novel solid phase extraction (SPE) HILIC stationary phase that excels at retention and recovery of labeled, released N-glycans! Available in microelution 96-well plate format that works extremely well for processing and clean-up of small sample volumes.

www.phenomenex.com/GlycanSPE

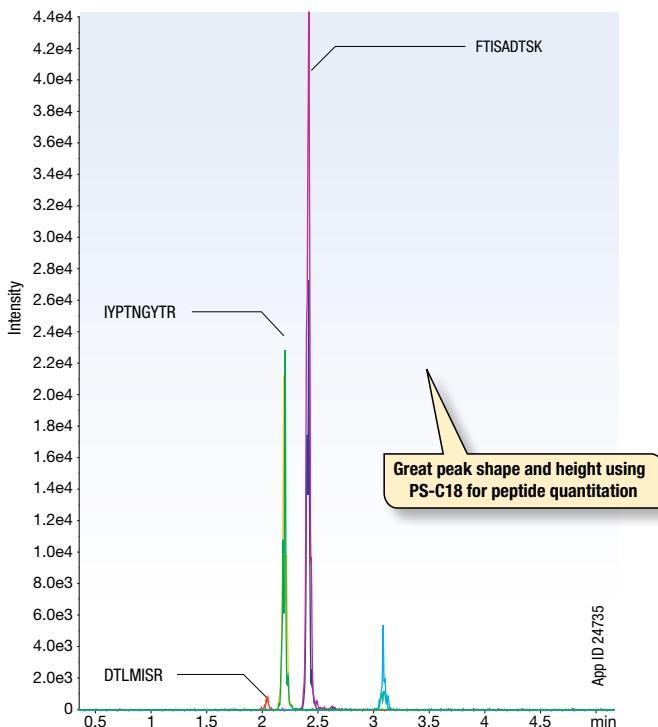

Peptide Quantitation

When quantitating signature peptides from biological matrices, you need sharp peak shape and sufficient retention of hydrophilic peptides to prevent any signal loss from matrix suppression regions. Both Biozen Peptide columns were developed to deliver excellent selectivity for even closely related peptides. Additionally, they build

on this body of valuable characteristics with unique ways of delivering sharper peak shape for basic peptides; Biozen Peptide XB-C18 blocks secondary surface interactions via isobutyl side chains, while the Biozen Peptide PS-C18 contains a positively charged weak base that repels other basic species.

Intact mAbs and Subunit Analysis

Impurity profiling and characterization of intact biologic fragments is a challenging undertaking because of the need to identify very small differences between variants. Biozen WidePore C4 columns contain skillfully manufactured large pore core-shell particles that

provide narrower, taller peaks in conjunction with higher resolution between the target HC/LC, Fc/Fab, or isoforms and are ideal for large biologics to optimize analysis.

Intact Mass

Intact Mass can give indications not only of relative abundance of glycoforms, but also stability as degraded mAbs will not give good charge envelope by ESI-MS. Intact Mass with a high resolution MS to identify PTMs, especially relative abundance of glycoforms, combines extremely well with the fast run times and tight peak shapes provided by the Biozen Intact XB-C8 and Biozen WidePore C4.

Drug Antibody Ratio (DAR)

With a direct effect on efficacy and safety, conjugation for each ADC must be well understood. The Biozen Intact XB-C8 provides an excellent vehicle for determining drug load distribution and DAR for ADCs. Its large pore size allows intact ADCs to interact with a moderately retentive stationary phase while the core-shell particle supplies increased efficiency to deliver the required resolution between ADC species with differing drug loads.

Bio QC Testing

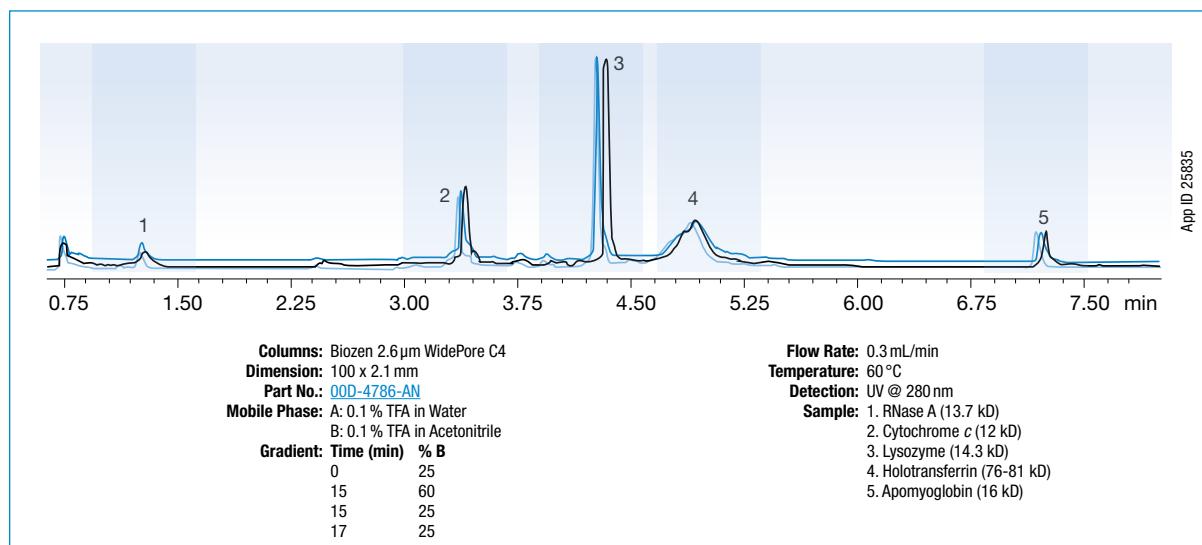

At every stage of our manufacturing and quality testing we keep you and your biologics analysis in mind. We initially focus on innovative products that will enhance workflows, then we work tirelessly to ensure that those products are reliably made time and time again. To further enrich the quality of these products, we assign very specific application-oriented testing protocols that properly mimic the conditions that you and other customers ultimately require.

Each batch of media and each column goes through a gambit of testing to ensure that you're getting our highest level of science, so that you can kick down the door of progress.

Batch-to-Batch Results—Biozen 2.6 µm WidePore C4

Biozen Nano LC Columns

Biozen Nano Columns offer a powerful combination of an advanced particle platform, three unique column chemistries, and fully integrated SecurityLINK Fitting Technology for a zero dead-volume connection.

- **Integrated SecurityLINK™ fittings for easy installation and leak-free connections (Now with double-ended SecurityLINK)**
- **Maximized resolution for improved protein/peptide identification**
- **Increased robustness and sensitivity**

Advanced Particle Platform

This Biozen particle platform was individually designed and built by Phenomenex to take advantage of integral levels of performance, ruggedness, and reproducibility for omics applications. Individually, each platform differs in the proprietary processing techniques used to control particle size and morphology.

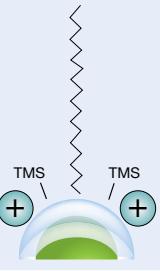

- **High Efficiency**
- **Excellent Inertness**
- **Increased Sensitivity**
- **Exceptional Quality and Robustness**

Core-Shell
Technology

3 Unique Nano Chemistries

Peptide

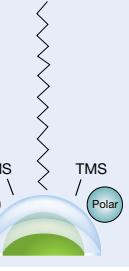

Biozen Peptide PS-C18

Excellent retention by combined positively charged surface ligand and C18 ligand.

Biozen Peptide XB-C18

Overall retention of both acidic and basic peptides through C18 stationary phase with di-isobutyl side chains.

Polar

Biozen Polar C18

Enhanced selectivity / retention for polar analytes without diminishing useful non-polar retention

Advanced Core-Shell Particle in Nano Format

The Biozen Nano columns utilize core-shell particles with a highly consistent morphology that minimizes band broadening associated with diffusion and mass transfer, leading to higher efficiency and minimal peak widths, which enhances the separation for omics analysis.

Core-Shell Particle Chemistry

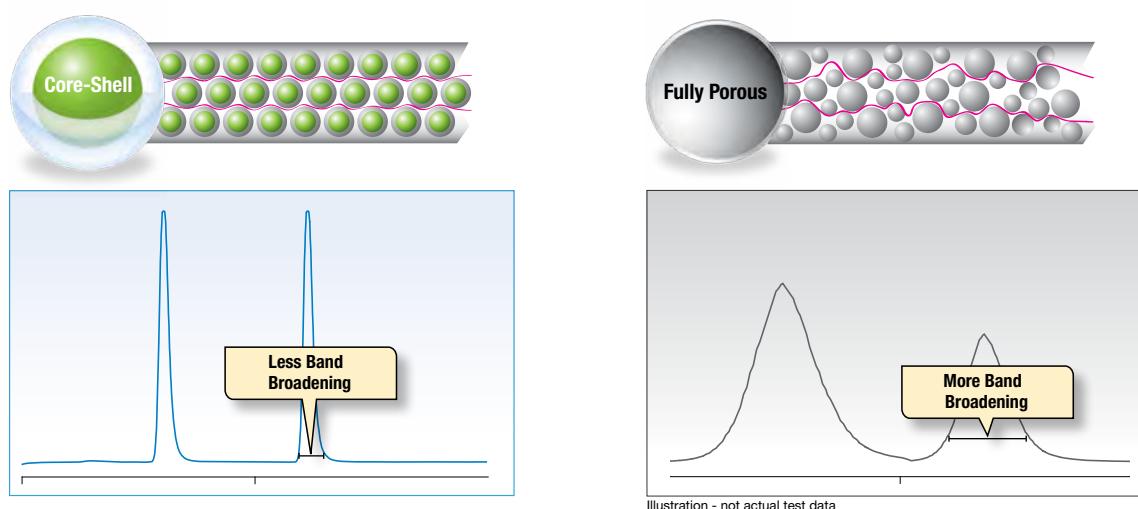

High Efficiency Core-Shell Particle	Fully Porous	Biozen Nano Core-Shell	Average Efficiency Gain with Biozen Nano Core-Shell
Using a rigorous core construction process, a uniform porous silica layer is grown around the spherical solid silica core. This unique combination of precise particle architecture and particle size provides dramatic leaps in performance.			90 % Higher
			85 % Higher
			Equivalent Efficiency

Better Performance than Fully Porous Particles

Core-Shell Technology provides extremely high efficiencies for omics analysis. Industry leading column packing technology in combination with high particle consistency produces highly reproducible columns that generate greater performance compared to

fully porous particles. This ultra-high efficiency can be leveraged to achieve increased resolution, improved sensitivity, and higher productivity.

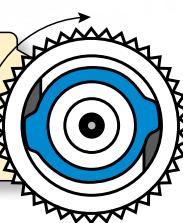

Zero Dead-Volume Nano LC Connections in a CLICK

Biozen Nano's fully integrated SecurityLINK™ fingertight fitting system simplifies your system connections while providing consistent performance through Torque Limiting Technology that prevents overtightening or undertightening making every connection leak-free.

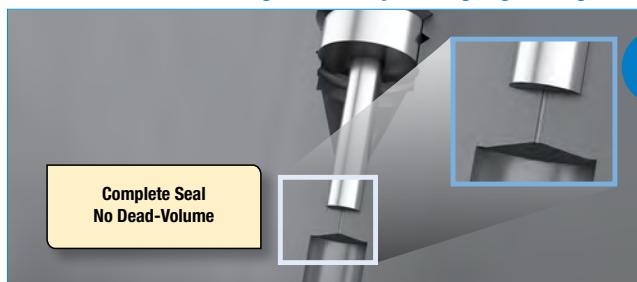

What is Torque Limiting Technology?

Once the perfect connection has been made through fingertightening, the SecurityLINK fitting offers a haptic "CLICK" to confirm that optimum torque has been reached. This ensures a consistent connection each and every time and prevents over or undertightening that may cause column performance issues.

Trap Columns (mm)	10 x 0.075	Unit
Phases		
RP-1 (General RP)	05N-4252-AW	3/pk
RP-2 (Aqueous Stable RP)	05N-4754-AW	3/pk

Trap Fitting Guide

Threads per Inch	Pitch (inches)	Pitch (mm)
32	0.0313	0.794
40	0.025	0.635

1/32" OD
0.8 mm
40 threads

1/32" OD
0.8 mm
32 threads

1/16" OD
1.6 mm
32 threads

Caution

The installation of an improper nut could potentially cause cross-threading or damage to the port and fitting
Verify fit: Traps are available for 1/16" connections (10-32 thread) or with 1/32" connections (6-40 or 6-32 thread).

Fittings

Ordering Information

Trap Fittings	Part No.	Description	Unit
PEEKLok™ fittings with 6-40 thread for 1/32" OD tubing (2 x fittings, 6 x ferrules and 1 x tightening tool)	AQ0-7602		ea
PEEKLok fittings with 6-32 thread for 1/32" OD tubing (2 x fittings, 6 x ferrules and 1 x tightening tool)	AQ0-7603		ea
PEEKLok fittings with 10-32 thread for 1/32" OD tubing with low profile hex head (2 x fittings, 6 x ferrules and 1 x wrench)	AQ0-7600		ea

Biozen High pH Fractionation Column

Bio-Inert Hardware

The Biozen High pH Fractionation HPLC Column provides superior performance with its titanium hardware which minimizes nonspecific adsorption resulting in increased confidence in your peptide identifications.

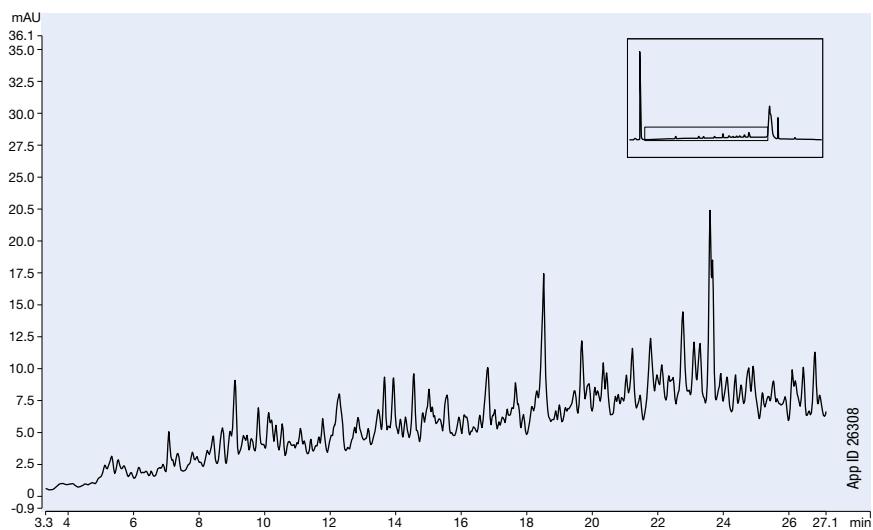

Inside the Biozen Biocompatible Hardware Difference

The use of bio-inert hardware not only improves the chromatographic performance, but also provides improvements in sensitivity.

Deep Proteome Coverage on HeLa Lysate using a Biozen Fractionation Column for High pH

UV trace of a 30 minute basic pH reversed phase separation using 100 µg of HeLa tryptic digest.

Fractionation LC Conditions

Column: Biozen 3 µm High pH Fractionation Column
Dimension: 150 x 2.1 mm
Part No.: [00F-4793-AN](#)

Pressure (bar): 150 bar

Mobile Phase: A: 10 mM Ammonium formate in Water
B: 10 mM Ammonium formate in 90% Acetonitrile and 10% Water

Gradient: Time (min)	% B
0	1
1	1
25	25
27	60
28	70
33	70
34	1

Flow Rate: 300 µL/min

Temperature: 50 °C

LC System: Vanquish™ Flex UHPLC

Detection: UV @ 280 nm

Injection Volume: 100 µL

µg on Column: 100 µg
